

Q3 .Seasonal Pattern Analysis

INSIGHTS

The line chart shows a clear seasonal pattern, with sales peaking in November and December and declining in the early months of the year. This recurring trend across years indicates strong year-end demand and mid-year fluctuations.

Q5 . Identify Highest Sales Month

matrix:

- December → 13,83,335.11 (Highest)
- Followed by:
 - November → 13,77,651.29
 - September → 12,44,139.73

Answer

The matrix visual shows that December has the highest total sales, followed closely by November, indicating peak sales during the year-end period.

Q7 . Outlier Analysis

! Clear Outlier Identified

- **Tables**

- Discount ~ 0.29 (very high)
 - Profit $\rightarrow$ Negative ($\sim -0.07M$)
 - ⚠ Strong loss despite high discount
-

 Other Observations

- Most sub-categories:
 - Stay between 0.12-0.18 discount
 - Have positive profit
 - High performers:
 - Copiers, Phones
 - 👉 High profit at moderate discounts
-

Answer

Yes, the scatter plot reveals an outlier where the Tables sub-category has a high discount and negative profit, indicating that excessive discounting leads to losses.
